

CROWN and BRIDGE – DISCUSSION and CONSENT
DENTAL PROFESSIONALS ON WHITESBURG

I am being provided this information and consent form so I may better understand the treatment recommended for me. Before beginning, I wish to be provided with enough information, in a way I can understand, to make a well-informed and confident decision regarding my proposed treatment.

I understand that **I may ask any questions I wish**, and that it is better to ask them before treatment begins than to wonder about it after treatment has started.

Nature of Crown Restorations

A crown restoration has been recommended for me on the following tooth (teeth): _____.

Crown restorations cover and protect teeth that have been weakened by decay, prior restorations, or root canal treatment. Crowns can also be placed to change the bite or for cosmetic purposes. Crowns require at least two visits to complete treatment. At the first visit, the dentist uses the drill to reduce the size of the tooth. This makes room for the crown itself to fit on the remaining stump of tooth, called the preparation. After drilling is complete, an impression, or mold, of the preparation is made using a rubbery material. A plastic temporary crown is held on the tooth with temporary cement while the crown restoration is being made by a dental laboratory. It is important to return for the cementation of the new crown as soon as it is ready in order to reduce the chance of redecay or other problems.

This recommendation is based on visual examination(s), on any x-rays, models, photos and other diagnostic tests taken, and on my doctor's knowledge of my medical and dental history. My needs and desires have also been taken into consideration. The crown restoration is necessary because of:

____ Extensive decay ____ Broken tooth ____ Decay around large prior filling ____ Changing my bite
____ Cosmetic purposes ____ Other _____

The intended **benefit** of a crown restoration is to replace missing natural tooth structure and restore the tooth to normal function. The crown restoration also may relieve current symptoms of discomfort I may be having.

Risks of Crown Restorations

I have been informed and fully understand that there are certain inherent and potential risks associated with crown restorations. I understand that the nerve inside my tooth may be irritated by treatment and I may experience pain or discomfort during and/or after treatment. My tooth may become more sensitive to hot and cold liquids and foods. I understand that root canal treatment may become necessary at any point during or after treatment and may not be avoidable. I understand that a crown restoration may not relieve my symptoms.

I understand that once prior fillings and decay are removed, it may reveal a more severe condition of my tooth. This condition may require root canal treatment in addition to a crown restoration, or may instead require the extraction of the tooth.

I understand that I may notice slight changes in my bite. I understand that during and for several days following treatment I may experience stiff and sore jaws from keeping my mouth open.

I understand there may be injury to my gums adjacent to the tooth. I understand that my gums may recede after the completion of my crown restoration. I understand that poor eating habits, oral habits (smoking, fingernail biting, etc.,) and poor oral hygiene will negatively affect how long my crown lasts.

I understand that I will be given a local anesthetic injection and that in rare instances patients have had an allergic reaction to the anesthetic, an adverse medication reaction to the anesthetic, or temporary or permanent injury to nerves and/or blood vessels from the injection. I understand that the injection area(s) may be uncomfortable following treatment and that my jaw may be stiff and sore from holding my mouth open during treatment.

I understand that once a crown restoration is started, I must promptly return to have the crown finished. If I fail to return to have the crown finished, I risk decay, the need for root canal treatment, tooth fracture and loss of the tooth.

Other foreseeable risks not stated above include: _____.

Acknowledgment

I have provided as accurate and complete a medical and personal history as possible, including antibiotics, drugs, or other medications I am currently taking as well as those to which I am allergic. I will follow any and all treatment and post-treatment instructions as explained and directed to me and will permit the recommended diagnostic procedures, including x-rays.

I realize that in spite of the possible complications and risks, my recommended crown restoration is necessary. I am aware that the practice of dentistry is not an exact science and I acknowledge that no guarantees, warranties, or representations have been made to me concerning the results of the treatment.

_____ I have had an opportunity to ask questions about these risks and any other risks I have heard or thought about, including:
Patient's Initials _____.

I wish to proceed with the recommended treatment.
